

## Assets

Field	Description
lansweeperId	Internal identifier.
url	URL of the asset in cloud.
key	Unique identifier of an asset.
domain	Domain the asset belongs to.
name	Asset name. The scanned asset name of non-Windows machines can be manually overwritten. For Windows machines, the real computer name is always used. If you rename a Windows computer within Lansweeper, a new asset will be generated upon rescanning or the name of the existing asset will be changed back to the actual computer name.
description	Asset description. This field is automatically populated for Linux, Windows and SNMP enabled devices. For other assets, it is meant to be filled in manually.
uptime	How long the asset's been on since the last boot, in seconds.
fqdn	FQDN of the asset.
ipAddress	IP address in text format. If a machine has multiple IP addresses, this field stores the last IP to be scanned.
lastSeen	Last successful scan of the asset.
mac	Asset's main MAC address.
type	Asset's type.
userDomain	Domain of the last logged on user.
userName	Name of the last logged on user.
firstSeen	First scan attempt made for the asset, successful or unsuccessful.
lastChanged	Last time the record was changed.
lsPushVersion	Lansweeper version number of the last LsPush scanning agent to scan the asset.
lsAgentVersion	LsAgent version number of the last LsAgent installation to locally scan the asset.
lastActiveScan	Last scan attempt made for the asset by the Active Scanning scanning method, successful or unsuccessful.
lastIpScan	Last scan attempt made for the asset by the IP Address Range Scanning scanning method, successful or unsuccessful.
lastLsAgent	Last scan of the asset by an LsAgent installation.
lastLsFallback	DateTime from the last LsFallback scan.
lastTried	Last scan attempt made for the asset, successful or unsuccessful.
lastLsPush	Last scan of the asset by the LsPush scanning agent.
lastPerformanceScan	DateTime when the performance information was last scanned.
lastSccmScan	Last time the asset was scanned by SCCM.
lastScheduled	Last scan attempt made for the asset by the Scheduled Computer Scanning scanning method, successful or unsuccessful.

lastTriggered	Last scan attempt made for the asset using one of the Rescan buttons, successful or unsuccessful.
manufacturer	Manufacturer.
model	Asset's model.
firmwareVersion	Firmware version, retrieved from plug and play devices via the UPnP, DNS-SD or SSDP protocol.
serialNumber	Serial number.
sku	Asset's SKU.
stateName	State name.
orderNumber	Order number.
warrantyDate	When the asset's warranty expires.
purchaseDate	When the asset was purchased.
OS	Short description of the operating system version. For example, Microsoft Windows XP Professional Version: 5.1.2500.
processor	CPU type and family, for example: Intel Xeon CPU 5130 @ 2.00GHz
memory	Memory in Megabytes

#### Software

Field	Description
installedSoftwarebyName	Name of the software.
installedSoftwarePublisher	Software's publisher.
installedSoftwareVersion	Software's version.
installedSoftwareInstallDate	Software install date
InstalledSoftwareShortName	A shortened software name, which can be used as AssetId in the software template

#### Asset Software Link

assetBasicInfoName	Asset name.
installedSoftwarebyName	List of installed software on the Asset.
installedSoftwarebyNameShort	List of installed software used for the link between assets and software.
